Custom-built Content Connectors

What?	Partners or Services can now create Content connectors with any 3 rd party content vendor that exposes REST API.
Why?	<ul style="list-style-type: none">- Demand for many content connectors from customers.- Eliminates need to build, host and maintain middleware by partners / services.
Where?	<ol style="list-style-type: none">1. Extended Integration > Imports Framework2. Marketplace
Key Notes	<ul style="list-style-type: none">• Connector can synchronize course metadata and Results.• Both metadata must be available as REST APIs with JSON output.• There must be only 1 API for fetching metadata and 1 for results.• Configurations available for frequency of sync, full/delta, mapping fields, etc.• Framework only available to Partners and services. Customers cannot access this.• Connectors created in this manner will appear on the Marketplace.• This is not for creating a one-off connector for one customer. It is for creating a more generic connector that is applicable to potentially all customers.• <i>Extended Integration</i> is only available on certain pre-designated environments meant for such development. It cannot be enabled on customer environments.• This connector does not include ability to establish a seamless launch.

Activation key simplification

What?	Activation key automatically populated on purchase of a connector.
Why?	Eliminate confusion and friction around getting activation key.
Where?	Marketplace
Key Notes	<ul style="list-style-type: none">- Once Saba operations is notified of a connector purchase, Saba will generate and populate the Activation key in the connector.- The connector will be ready with an activation key, whenever the customer is willing to configure it.- During configuration, activation key only appears read-only. It cannot be entered or removed by a customer.

Workday Connector

What?	A new flag to include certain outlier changes that do not otherwise get synchronized in Saba.
Why?	Sometimes changes done in Workday fell outside of the date bounds of what the connector could reasonably capture. E.g. if a person was terminated as of a month in past. Or if the termination date was set as one year in the future. Such changes could either not be captured or if captured, would result in a very big data load every day.
Where?	Marketplace
Key Notes	<p>A new flag changes the way Workday sync operates. By default it is off, so existing functionality is unchanged.</p> <p>If turned on, Saba makes 2 API calls (below) to Workday, and merges the results.</p> <ol style="list-style-type: none">1. Find all workers updated in the last 1-2 days (effective Y days in future and Z days in Past). Z is the new parameter meant to capture past effective events. It can be set to say 180 or 360 days.2. Find all workers who become effective today (regardless of when they were updated). <p>This ensures most past events and those with far off effective dates get captured.</p>

Workday Connector

Start Date*	<input type="text" value="02/05/2018"/>	
Update From	<input type="text" value="12/17/2018"/>	
Days to calculate Update From date	<input type="text" value="0"/>	
Number of past days to calculate 'Effective From'	<input type="text" value="180"/>	
Number of future days to calculate Effective Through date	<input type="text" value="15"/>	
Calculate As_of_Effective_Date in GMT	<input checked="" type="checkbox"/>	
Full run after days	<input type="text" value="10"/>	
Update From date during Full Run	<input type="text" value="01/01/2015"/>	

Enable Import
without 'Update
Criteria' method.

UltiPro Connector exposes more fields

What?	Additional fields available in the UltiPro Connector.
Why?	The current connector did not expose certain Employment related fields as well as User Defined Fields.
Where?	Marketplace
Key Notes	<ul style="list-style-type: none">- Additional fields exposed: employeeType, employeeStatus, dateOfSeniority, dateLastWorked, dateInJob, primaryProjectCode, originalHireDate, lastHireDate, jobTitle- Also exposed: User Defined Fields in UltiPro

Saba Publisher / Inspire v18

What?	Saba releases version 18 of Publisher and Inspire
Why?	Provide the latest upgrade of Saba Publisher / Inspire.
Where?	Separate Desktop Applications
Key Notes	Available with Update 43

Change Thumbnails in Saba Video

What?	Change Thumbnails on Saba Video
Why?	The default thumbnail was not always the preferred one. Now you can choose the preferred one.
Where?	System Admin > Manage Videos Learning Admin > Manage Videos Social Admin > Manage Videos
Key Notes	<ul style="list-style-type: none">• Saba supports more than one thumbnails but only one set as default.• Thumbnails can be added or removed (except the default one).• New thumbnail can be added by grabbing a new thumbnail by playing the video and pausing it at the frame desired as thumbnail.• Thumbnail must be a frame captured using the above mechanism. It cannot accept images uploaded.

Proxy visibility controls

What?	Framework support to allow restrictions in the application screens for a proxy session
Why?	<p>Legacy proxy sessions allow the “proxying” person to view sensitive data as well. This was raised as business concern by multiple customers especially from the healthcare vertical.</p> <p>To address these concerns, we created the “Proxy Visibility” component which is associated with the “Internal Person Basic Privileges”. It has 3 privileges enabled by default to allow controls on visibility of Reviews, Goals and Skills.</p>
Where?	System->Manage Security->Internal Person Basic Privileges->Proxy Visibility
Key Notes	<ul style="list-style-type: none">• Proxy always refers to the roles and privileges of the “prox-ied” person and this design will continue to maintain parity with current usage across the customer base• With the introduction of this new component, “Proxy Visibility”, the 3 privileges namely “Proxy user can access Goals”, “Proxy user can access Skills”, “Proxy user can access Reviews” allow the customer to decide the behavior when in a proxy session• Other modules can add similar privileges to the Proxy Visibility component and limit the proxy session accordingly

Domain aware Microapp system canvas

What?	The existing microapp as system canvas has been made domain-aware in this release
Why?	Allows the flexibility for extended enterprise customers to create domain specific system canvas using microapps. At present, the microapp canvas is universal and so customers have to create microapps with neutral themes when covering an audience across sub brands.
Where?	System->Configure System->MicroApps->Edit Microapp
Key Notes	<ul style="list-style-type: none">• The existing position reporting was limited to few dimensions that helped identify the associated positions to a person but could not represent the position hierarchy based information• With this introduction, it is possible to understand from a report –<ul style="list-style-type: none">• Complete position hierarchy with incumbents and primary for a position• Combine positions and learning details to associated persons in the position hierarchy• Match the application in presenting the data related to a position hierarchy at the manager level

Domain aware Microapp system canvas

The screenshot displays the SABA MicroApp configuration interface. The left sidebar contains a navigation menu with the following items: System Home, Configure System (expanded), Services, MicroApps (highlighted in green), Microsites, Microsite Properties, Languages, Currencies, Countries, Exchange Rates, Manage Videos, SSO Keys, SAML SSO Setup, and Compare Settings. The main content area is titled 'MicroApp Details' and includes a breadcrumb trail: Admin / System / Configure System / MicroApps. The form contains several fields: Name* (MicroappSystemCanvasDomainAwai), Title* (Microapp System Canvas Domain Aw), Description* (Microapp System Canvas Domain Aware, with a character limit of 255), Gadget Type* (Canvas View), Domain (world, highlighted with a red box), Gadget URL* (empty), Gadget File* (Choose File, No file chosen), and Params To Gadget (iframescript.xml, with an example: e.g. name:Tom,age:35). A 'Show me how...' tooltip is visible on the right side of the form. At the bottom right, there are 'SAVE' and 'CANCEL' buttons, and a status bar showing 'Who's Online (0)'.

REST API: Pulse 360 APIs

What?	REST APIs to Post Pulse response and get Pulse related data
Why?	Customers needed a way to expose the Pulse functionality to another commonly used portals like Intranet or Salesforce.
Where?	<ul style="list-style-type: none">• REST API Reference > Performance > Pulse
Key Notes	<p>APIs created:</p> <ul style="list-style-type: none">- Get Active Survey (Pulse Survey) Detail- Get Active Survey (Pulse Survey) Question Details- Post Pulse Survey as an administrator- Get Pulse Dashboard Details- Get Admin Heatmap data- Get Chart Question data <p>Refer REST API Reference for more details.</p>

REST API: Other APIs

What?	<ol style="list-style-type: none">1. API to Assess skills2. APIs for retrieving checklists as learner or evaluator3. APIs to get Learning as Org Admin4. API to create and update calendar appointments
Why?	Customers needed more ways to integrate 3rd party applications or micro apps.
Where?	<ul style="list-style-type: none">• REST API Reference
Key Notes	<p>APIs created:</p> <ul style="list-style-type: none">• API to assess skill of a person• API to get Checklists for a person as a learner• API to retrieve all checklists as Evaluator• API to Get Checklists (using search) and Get Detail on single checklist• Org Manager can view all their learners' progress in one Learning item in a single API. Additionally, they can view all Learning for one person at a time.• API to create / update an appointment on the calendar <p>Notes</p> <ol style="list-style-type: none">1. For evaluators, only checklists where they are adhoc evaluator are shown.2. For Org Manager APIs, the Org Id is a required parameter

Result Reporting Data Import

What?	Load Completion Results <i>per content</i> using Imports rather than just APIs.
Why?	Extensibility of Content Integration.
Where?	System Admin > Integration Studio
Key Notes	<ul style="list-style-type: none">- Key fields: Learner Username, Content Vendor, External Content ID- Last attempt is marked complete and rollup is triggered. If 0 attempts, then attempt row is created, marked complete and rollup triggered.- Affects all registrations where this content exists.- No adhoc transcript created, if no registration exists.

Bulk Content Import Enhancements

What?	<ol style="list-style-type: none">1. Bulk load videos into Saba Video.2. Expose Course Discontinue options when course gets discontinued3. Support Course ID
Why?	<ol style="list-style-type: none">1. Help customers moving videos from another system into Saba Video.2. Learners would continue to try launching discontinued courses3. Customers could not provide their own Course IDs when using this import
Where?	System Admin > Integration Studio
Key Notes	<ul style="list-style-type: none">- Videos being loaded would still be counted against the max limit purchased.- Additional Discontinue options are:<ul style="list-style-type: none">- Remove Courses from all plans- Drop Registrations- Cancel / Discontinue Classes

Associate Library Skills to Courses, etc.

What?	Ability to associate Library Skills to Courses, etc.
Why?	Saba makes available 2 libraries of skills - Saba Skills and DDI Skills. It was not possible earlier to associate such skills to courses, thus reducing their usability.
Where?	System Admin > Integration Studio
Key Notes	Objects where this is possible now: Course Role Skill Group Adhoc Transcript Held Skills MRA Job Requisition Job Candidate Attachments Person Competency
